

# BRAINTEASER 1

A farmer is returning from market where he has bought a ewe, a wolf and a cabbage. On the way home he must cross a river. His boat is small, only allowing him to carry one of the three things across at a time.

He can't leave the ewe with the cabbage as she will eat it. Nor can he leave the wolf with the ewe as it will bite her.

How will the farmer reach the other side, while making sure all three things are safe?
